Always be ready
for business –
24/7 real-time
monitoring

DORVISION: Always be ready for business – 24/7 real-time monitoring

DORVISION is a GPRS based wireless system concealed within the door equipment. This allows your doors, wherever they are, to provide usage and performance information 24/7.

DORVISION can be interfaced with any type of automatic door operator to enable real-time remote control functionality of the doors main controls.

Should a problem arise with the door, it will allow the DORMA Service team to reset the doors remotely or get a service engineer to attend if required.

DORVISION allows you to access this information through the internet. You can monitor the performance of the doors and determine footfall trends through the doors. With DORVISION you will always be ready for business.

A fault with your door could lead to customer dissatisfaction and loss of revenue

Data captured by DORVISION

Fault diagnosed, door controlled remotely offering immediate response

DORMA Service team notified and response type decided

DORVISION

A Possible Scenario:

Key Benefits:

- Real time remote control facility
- Recording of switching and safety device activations
- Remote diagnostics
- Suitable for new installations or retro-fitted to existing doors
- Low cost door management system

Customer Benefits:

- Remote locking/unlocking (if electric lock fitted)
- Timed automatic locking
- Remote activation of the door (opening / closing)
- Client access via internet based gateway through a secure login
- First level footfall reporting allows you to see how often the door is activated

Problem Solving:

- Initiates an immediate response to callouts
- Remote reset facility for most door types
- Automatic pre-determined alerts by email

Environmental:

- Reduced engineer attendance due to remote reset - reduced carbon footprint
- Reduced maintenance costs; increased likelihood of first time fix

Additional Options:

- SMS text message reporting / controlling facility
- Access control
